OVERVIEW

Standss is excited to announce the release of SendGuard quarterly updates. This is a new release and contains new features, improvements, and bug fixes.

The key highlights of this release include **Mail Notification Alerts on Mobile Platforms (Outlook on Android and iOS), user action logging for the open Task Pane Addin and other bug fixes for SendGuard M365**

Users of previous versions will need to contact their account manager at Standss (or email us at sales@standss.com) to upgrade and get their new license information.

The following sections have more information on what's new, what's fixed and updates/deployment.

SendGuard365 Addin (For New Outlook (Windows & Mac), Outlook Web Access & Legacy Outlook for Mac)

What's New

Notification Alerts for Outlook on Mobile Platform (Android and iOS)

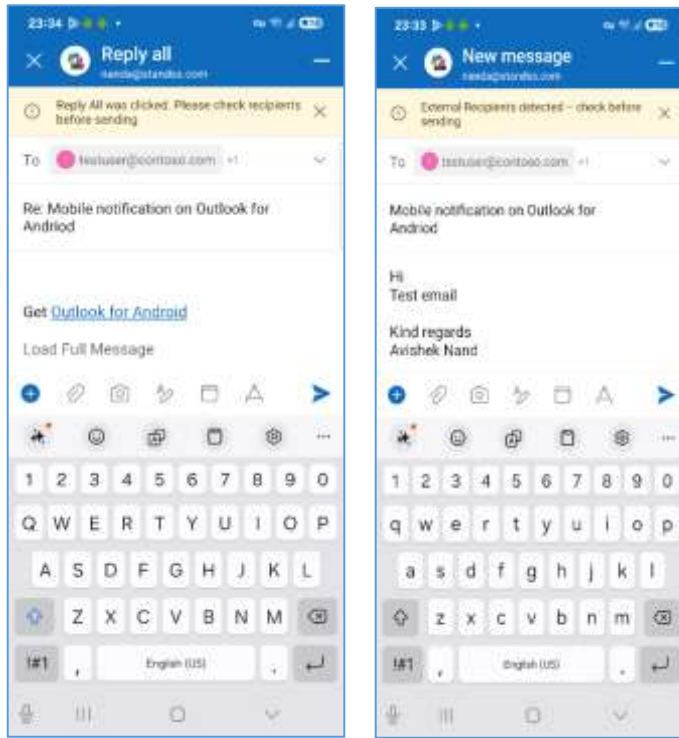

Mobile notifications are now supported on **Outlook for Android** and **Outlook for iOS**. Alerts are configured to notify users about emails being sent to external recipients.

When this feature is enabled, users will receive notifications on their mobile devices before the email is sent, allowing them to review and confirm the action.

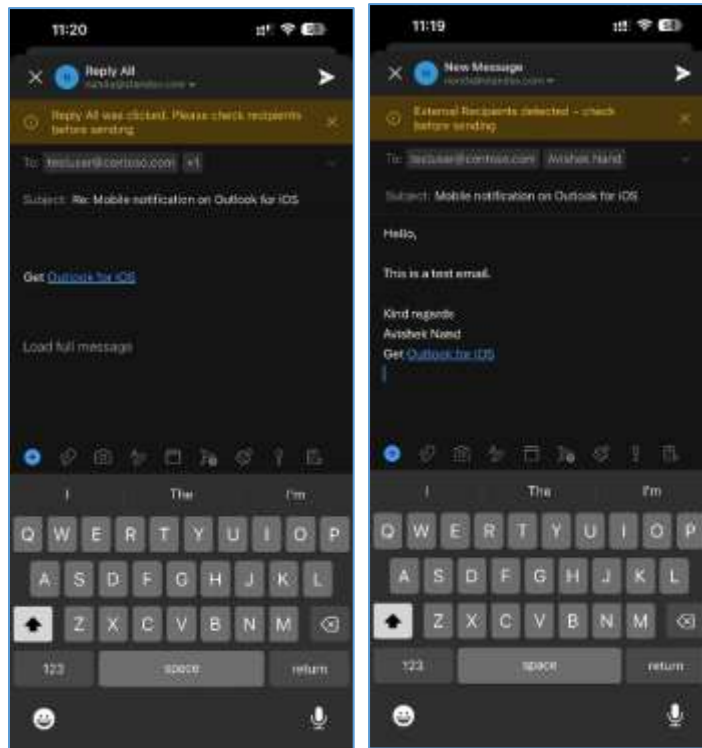

There are some current limitations on mobile platforms. **Attachment validation is not supported**, so any notification rules that depend on checking attachments will not trigger on Android or iOS.

The **Reply All** notification has also been enhanced and is now fully functional on both Outlook for Android and Outlook for iOS.

Outlook On Android:

Outlook On iOS

User Action Logging for Open Taskpane Add-in

The Taskpane Add-in now supports logging of user actions performed on the confirmation screen/taskpane. This includes actions related to **DLP and Custom Rules, Reply All, Attachment Guard, Too Many Recipients (TO/CC)**, and **Send Confirm** prompts shown in the task Pane.

All user action logs are stored in the customer's **Azure Storage Table within their tenant**.

Improvements

Send Confirm UI for Taskpane Add-in

The **SendConfirm** recipient table in the Taskpane Add-in has been enhanced to improve readability and overall usability. A new **drag handle** has been added, allowing users to move the table horizontally to view all recipients across different screen resolutions.

This improvement removes the need to scroll within the table, making it easier to review recipients before confirming to click send.

Execution Scope Flag for DLP and Custom Rules (Reduce Prompt Fatigue)

A new execution scope flag has been added to **DLP and Custom Rules**, allowing administrators to specify when a rule should run. Available options include **External Only** or **All Emails**.

This enhancement optimizes Taskpane Add-in processing by preventing the Taskpane from opening unnecessarily when rules are enabled. It also gives Administrators greater control over whether rules apply only to external emails or to all outgoing messages.

Bugs

Fix: Delay Send for External Recipients

Resolved an issue where the **Delay Send for External Recipients** setting was not working as expected. When enabled, emails were sent immediately and the **Send Now** option did not appear on the Send Confirm screen.

This behavior has now been corrected, and delay settings are applied properly before the email is sent.

Fix: Simple Prompt

Resolved an issue in the **Simple Prompt option for SendConfirm** where all recipients were being accidentally removed from the email, preventing the message from being sent and resulting in an Outlook error.

Fix: Case Sensitivity for External Domains (SG Lite)

Resolved an issue where the same external domain could appear multiple times in the prompt when entered using different letter casing. Domain handling is now case-insensitive, ensuring external domains are displayed only once.

SendGuard COM-Addin (Outlook Classic for Windows)

In the last quarterly update, there were no changes made to SendGuard's COM add-in version.

Standss SendGuard Management System

What's New

New Users Page for Subscription

The list of users assigned to a subscription has been moved to a dedicated **Users** page. This allows administrators to quickly view, search, add, and remove users from a single, focused screen.

Separating user management from the **General** page provides a cleaner layout and makes subscription administration easier and more efficient.

Improvements

Mobile Access to SendGuard Management Console

Administrators can now easily access the **SendGuard Management Console** from mobile devices. The updated UI allows admins to view subscriptions, manage users, and update settings directly from a mobile-friendly interface.

UI Enhancements

The **SendGuard M365 Settings** page has been further refined to provide a more uniform and polished layout. Visual alignment and spacing have been improved to create a cleaner, more consistent user experience across the page.

SendGuard M365 settings: Execution Scope Flag for DLP & Custom Rules

A new setting has been added to the **SendGuard M365 Settings** page for **DLP and Custom Rules**, allowing administrators to control when rules are executed. Admins can choose to apply rules to **External Only** emails or to **All Outgoing** emails.

This gives greater flexibility and control over rule enforcement while improving overall processing efficiency.

DEPLOYING THE NEW VERSION:

Priority Updates

SendGuard offers an annual subscription model which ensures that businesses get the best updates and support from our highly skilled staff.

SendGuard365 Addin Deployment

Office 365 Admin Centre

You can utilize Office 365 Admin Centre to deploy SendGuard365. If you have previously deployed the add-in, there is no need for redeployment as the new updates have already been pushed out. If you wish to modify your settings or require additional information regarding the deployment of SendGuard365, please reach out to your account manager or contact sales@standss.com

SendGuard COM- Addin Deployment

MSI

Please contact your account manager at Standss or email us at sales@standss.com for a link to the latest file. We can assist you to deploy the new version with your existing or new settings.

Deploy using Microsoft Intune

SendGuard for Outlook is a per-machine software and therefore can be deployed via Intune. SendGuard will be installed silently if all registered devices are set-up correctly. Please contact us at sales@standss.com for assistance regarding deployment using Microsoft Intune.

Use Group Policy Object (GPO) Templates (ADMX)

If there have been changes to the registry keys, an ADMX template is required for deployment via GPO.

Please contact us at sales@standss.com for the updated ADMX/ADML file to deploy and maintain settings.
